

How to construct a simple protection mask from simple allover available materials

In the momentarily critic situation in the whole world protection masks may be no more available.

A protection mask shall not reduce the personal protection managment as distancing, desinfection, hand washing, blow the nose into ellbow and others – but can protect you and mainly your envirement!

Here's a simple idea how to construct a simple mask, who is washable, usable the whole life with simple materials which can be easily replaced !

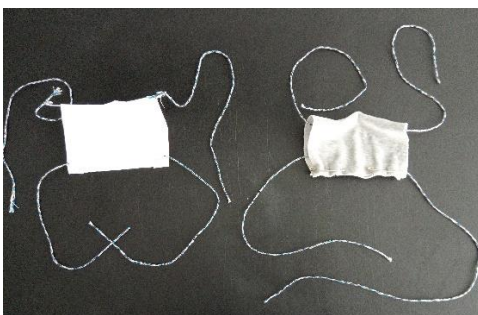

Materials:

- wire from coat hanger or paper clip
- paper tissue (paper handkerchief), piece of cloth with two safety pins
- package cord

Tools needed: plier, scsissor, bostitch or when using a piece of cloth two safety pins

Instructions:

- Cut a piece of wire to the needed length (23 cm / 9 inches) or use a paper clip for a smaler version, according the plan, bend it as in the drawing, cut three pieces of package cord to the needed length (two pices 45 cm (18 inches), one of 80 cm (31 inches))
- Fold the paper tissue as in the plan, make two borders on both sides, then fold it from top to bottom, fix it on the bottom with some bostiches – cut the cloth to the right size (15 x 20 cm / 6 x 8 inches), fold it and instead of bostich fix it with two safety clips on the left and the right bottom corner.
- Fix the two little package wires as in the instruction at the bended rings, the longer wire comes to the bottom side – use the mask as in picture!
- Adapt the wire at your special noze size!

Original shape of noze part

Litter the used paper tissue correctly after use, wash the cloth at highest temperature!

Don't forget the safety instructions and behaviour of the individual instructions of the health authority of your country
